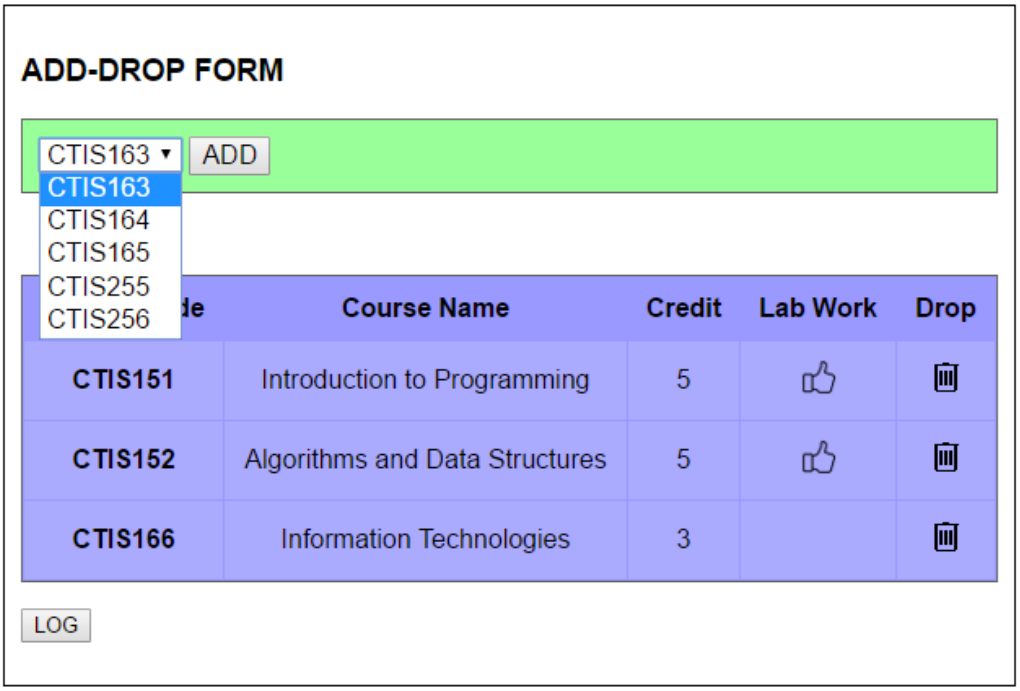
DATABASE EXERCISE

Q1. The main page shows add form at the top. It displays the courses in a list box, and a submit button. The course names are retrieved from “courses” table. However, in the list box, it should not show the courses taken by the user.
The query is "***select * from courses where id not in (select id from addedcourse)***".

When the user clicks on “ADD” submit button, it inserts the course into addedcourse table, you can use "***insert into addedcourse (id) values (?)***"



Q2. In the same page, display all the courses taken by the user in a table format. If the course has lab hours, show a thumbs-up icon.
The query is "***select * from addedCourse A, courses C where A.id = C.id order by C.id***"

Q3. In the table, the last column shows an icon to delete the added course. The query is "***delete from addedcourse where id = ?***".
